

## InteKrin, CJSC

From:	Chairman, Board of Directors
Date:	05 July 2017

Global Clinical Trials, LLC was contracted by CJSC "InteKrin" to manage Phase II clinical trial to investigate the innovative medical product in the tablet form intended for the treatment of patients with the relapsing-remitting multiple sclerosis.

Global Clinical Trials was assigned to perform the full range of services related to conducting the clinical trial: from obtaining the Competent Authority approval to the database lock and TMF transfer to Sponsor. Global Clinical Trials successfully fulfilled the selection of the research sites, sites and Pls contracting and payments, vendor contracting and management, general project management, and clinical monitoring of the sites. There were more than 220 patients enrolled across 21 research sites in accordance with the randomization schedule.

Due to the Global Clinical Trials staff's expertise and the coordinated work, the project was executed in a timely manner, within the planned budget, and with a high-quality level, which was assured by a number of audits undertaken through the course of the trials. The professionalism of the company was highly regarded not only by our team but also by the investigators involved in the project.

Daily communication between the sponsor and Global Clinical Trials enabled addressing arising matters in the shortest time possible.

CJSC "InterKrin" would certainly recommend Global Clinical Trials, LLC as a CRO for other projects. We look forward to our further cooperation in conducting new clinical trials.

Chairman, Board of Directors
